

**LOWER GEORGES RIVER FLOODPLAIN RISK MANAGEMENT STUDY & PLAN
GWAWLEY BAY CATCHMENT FLOOD STUDY
by Sutherland Shire Council**

RESIDENT RESPONSE

I express to Sutherland Shire Council (SSC) my extreme concern and disappointment based on the following: (please tick if you agree)

- Areas affected by this study have no recorded history of flooding, other than localised flooding directly due to inappropriate infrastructure &/or maintenance of the drainage system by SSC
- Findings of this study do not reflect actual historical records
- SSC must immediately and comprehensively clear blocked drains and appropriately upgrade the drainage systems
- SSC is to immediately cancel the current initial preliminary "flood prone" classification on any property associated with this matter
- SSC has failed the community and demonstrated negligence towards it's duty of care towards appropriate town planning and infrastructure management
- I refuse to allow SSC to do anything that may result in any reclassification of my property as a result of failures to provide appropriate town planning, infrastructure and management of stormwater and other water management systems
- I endorse the Shire FloodWatch Group's efforts to continue to inform the community of all matters associated with this situation
- I demand SSC instruct the consultants to perform their studies and models using criteria that presume all drains and culverts are perfectly maintained and appropriate drainage infrastructure is in place
